

RESISTOMAT® for high-speed resistance measurement in automation

MODEL **2311**

Preliminary data sheet

Rear view of device with connections

Highlights

- Measuring ranges of 20 m Ω ... to 200 k Ω
- Resolution up to 1 $\mu\Omega$
- Measurement accuracy 0.03 % of reading
- High-speed measurements from 10 ms/measurement, including evaluation
- Temperature compensation for all materials
- Thermoelectric voltage compensation
- Input protection up to 400 V_{eff}
- 32 adjustable measuring programs
- Dry circuit measurement in accordance with DIN IEC 512

Options

- Flexible fieldbus integration with EtherCAT, PROFINET or EtherNet/IP
- Installation variant without display

Areas of application

- Resistance measurement of fuses or heating wire coils
- Resistance determination of solenoid coils
- Plug contacts and mechanical switches
- Determination of transitional resistances

Product description

The RESISTOMAT® model 2311 has been designed and optimized for high-speed applications in automation systems. Up to 100 measurements per second can be achieved. It works on the basis of the well-tried four-wire measurement method in which test-lead resistances and contact resistances are eliminated. The instrument leads are monitored for damage by a built-in open circuit detector.

A 2-way and 4-way comparator with switching outputs is available for classifications and selections. Of course, temperature compensation is available for any test object material. Specific temperature coefficients can be entered. Temperature recording takes place using a PT100 sensor or a temperature transmitter (pyrometer) with an analog output.

A special circuit for protecting the measurement input when measuring inductive test objects has been developed to prevent damage to the meter from voltage peaks produced when the test object is disconnected.

A special area of application is the measuring of contact resistances (dry circuit measurement), since the load voltage is limited to 20 mV in order to avoid so-called "fritting" (DIN IEC 512).

All device settings can be individually stored in up to 32 measuring programs. Of course, all device settings can also be made via the Ethernet, USB (default) or fieldbus interfaces (optional). Up to 900 measurements per measuring program can be stored using the integrated data logger.

PROFINET						
Connection	2 x RJ45, 10/100 Mbit/s					
	RT communication					
	Cyclic data transmission (process data)					
Communication	Transmission of PLC data such as measurement results or the current program number from the device to an EtherCAT controller and actuation of the device, e.g. channel selection or measurement start/stop by an Ethernet controller.					
	Acyclic data transmission (configuration data)					
	Device configuration, e.g. setting of comparator limits or modification of the assignment of PLC inputs and outputs.					
Ethernet/IP						
Connection	2 x RJ45, 10/100 Mbit/s					
	Cyclic data transmission (implicit messaging)					
Communication	Transmission of PLC data such as measurement results or the current program number from the device to an EtherCAT controller and actuation of the device, e.g. channel selection or measurement start/stop by an Ethernet controller.					
	Acyclic data transmission (explicit messaging)					
	Device configuration, e.g. setting of comparator limits or modification of the assignment of PLC inputs and outputs.					

Display measuring mode

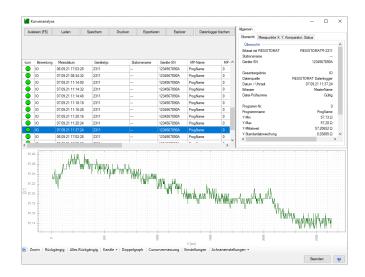

Rear view with connections

The full version of the DigiControl software contains the following features for the RESISTOMAT® model 2311:

- Convenient parameterization of the 32 measurement programs
- Copy programs
- Backup of device settings (download)
- Print device settings
- Command line for service purposes
- Measurement polling (data logging) triggerable under time control and externally via the device
- Measurement export/storage in a BIFF Excel file
- Printout of a measurement report with flexible design options
- Readout, display and storage of the cooling curve in a BIFF Excel file and triggering of external calculation of an extrapolation by an Excel macro
- Manual calibration of the RESISTOMAT® 2311
- Calibration via product database handover date

Accessories

Order code	
2392-V001	PT100 temperature sensor with 2.5 m shielded connecting cable and connector
2328-Z001	Pyrometer for temperature range of 0 100 °C
2311-P001	DigiControl PC software
9900-V160	25-pin connector for digital I/O interface
9900-V209	9-pin connector for analog I/O interface
2311-Z001	Fixing kit for front-panel mounting

Calibration

Calibration certificates					
23WKS-2311	Standard factory calibration certificate (WKS)				
23DKD-2311	Calibration certificate with accreditation symbol (DAkkS)
