

Elabo TaMo

Mobile
carrier system
for industrial use

Elabo TaMo Modular carrier system

M-Frame

TaMo is conceived modularly. The M-frame basic carrier consists of the pivoting casters, the bottom plate which serves at the same time as an undermost storage unit, and the sturdy welded lateral function carriers.

Function carriers

The function carriers can be executed in 2 widths and 3 heights according to the demanded applications. They serve as a universal integration element of all modular function parts and components. For cable installation, openings are integrated which can optionally be hidden by brush-strips.

Function carrier covers

The optional lateral function carrier covers can be folded open. They hide all adaption elements and offer safe protection of all integrated electrical outlets and other components.

Pivoting casters with track widening

The large, easy running casters overcome every threshold and bump. Aluminium pressure die-casting parts strengthen the mounting of the casters at the floor plate or the function carriers. Thus, even heavy loads are moved in a safe manner.

System accessories

The 25 mm height mounting grid accepts: storage trays, storage boards, drawers, bin rails, patch boards, universal rails for grip containers or cable reels, and many other equipment options.

Variable mounting positions

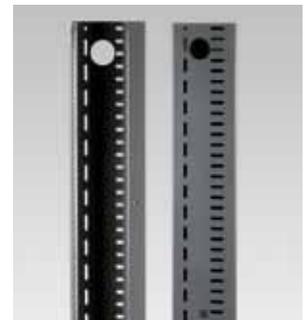

Storage boards can be mounted horizontally or inclined (by 0-15°, 15-30°). The 600 mm deep boards can be moved in depth.

Electrical installation and cable management

Cables, socket bars, compressed air and communication connections can be integrated without problems in the vertical function carriers.

System handles

Handle variants mountable horizontally and vertically on the outside offer simple and safe handling during transportation.

The Elabo TaMo system offers an enormous range of application-oriented executions.

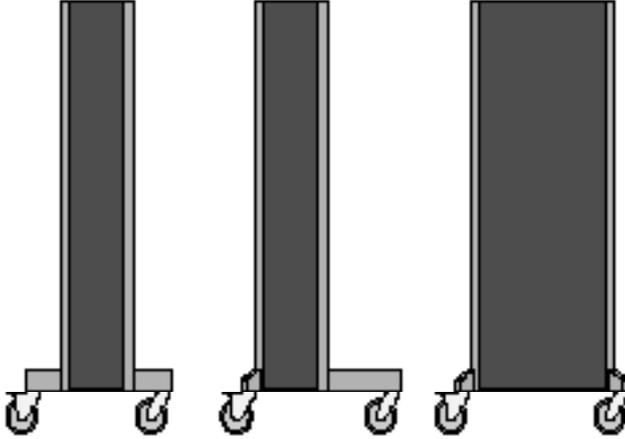

With few basic components it is possible to configure variations for almost every application requirement.

Thanks to the modular concept, adaptations to changing requests are possible at any time.

TaMo is also available in a conductive ESD version for ESD protected areas (EPA) in accordance with IEC 61340-5-1.

System grid Specifications

M-frame-Variants

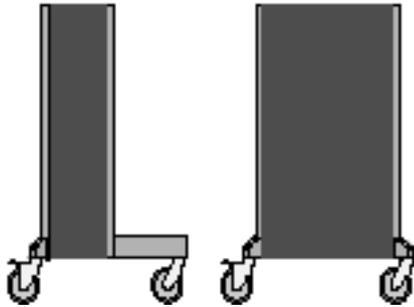

Depending on position and width of the vertical function carrier and the number of track widenings three construction variants are available:

center Function carrier widths: 300 mm

back Function carrier widths: 300 mm
2 track widenings

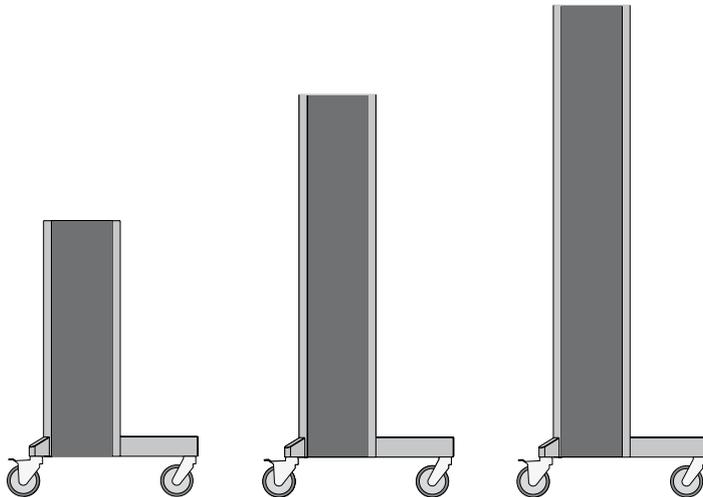

trolley Function carrier widths 600 mm
4 track widenings

Function carrier grid

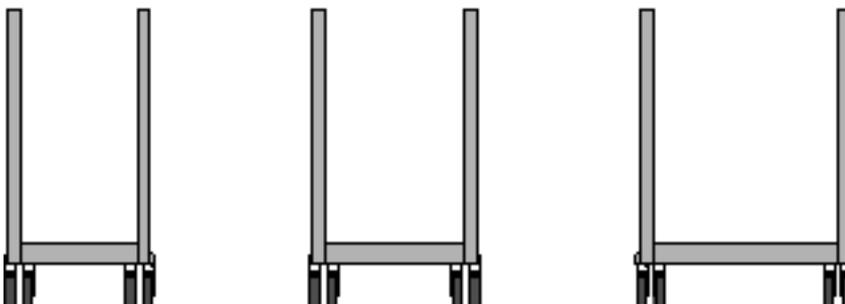

Width: 300, 600 mm
Depth: 55 mm
Parts height grid: 25 mm
Parts inclination adjustment: 0-15°, 15-30°

System height grid

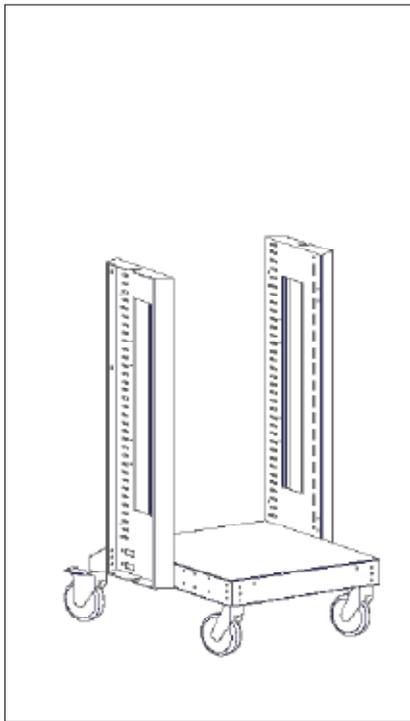

Total height: 1100, 1600, 1960 mm
Usable height: 860, 1360, 1720 mm

System width grid

Outside dimension: 630, 730, 930 mm
Clear inner width: 520, 620, 820 mm

System-depth: 600 mm (Base plate)

M-Frame back

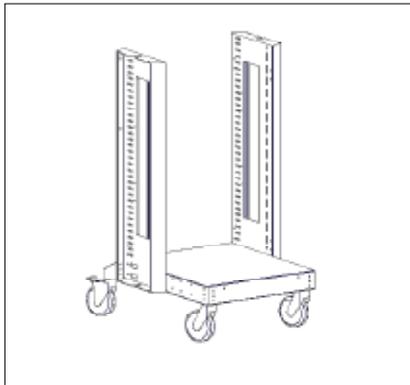

Color: basalt grey (RAL 7012)
powder-coated

M-Frame back

Basic carrier with floor plate,
2 vertical function carriers in 1 width and 3 heights,
assembled off-center at the side in the back.
4 casters with diameter 125 mm, front pivoting casters
assembled under the floor plate rear pivoting casters with
track widenings mounted on the vertical function carriers
and equipped with locks.

Elabo places highest value on your safety and the trouble-free use of our products. Given the enormous variety offered in the individual configuration of TaMo, you may get closer to the limits of stability of the mobile system than intended. We therefore recommend reviewing your configuration with our consultants. We will gladly be available for advice at any time.

ELABO GmbH.
Highly flexible solutions.
Efficient and economic

Elabo is the partner for enterprises and institutions which produce or integrate electrical and electronic products and components or use those components for quality assurance. For these customers Elabo develops modular and custom-made highly flexible and very economic systems.

The range of products extends from the conception and equipment of special rooms – for example electrical labs – to a customer's individual engineering and the construction of complex quality assurance facilities.

Elabo's efficiency is based on comprehensive know-how in electrical engineering and electronics, mechanics and ergonomics, process management and logistics as well as sound knowledge of work place health, safety regulations and technical standards. Elabo is both a hardware producer and a knowledge service provider, who focuses its performances on the specific requirements of its customers. Most of our products are made in-house. The basis for Elabo's strong position is that we have the capabilities and technical facilities for high-quality realization of concepts.

Elabo, founded in 1972, has 150 employees and is today a European market leader in its field.

Elabo LabSystems provides complete turn-key solutions for quality assurance, research, development and trial, prototyping and service workshops in electric laboratories.

Elabo Electronic develops and produces test and measurement instruments and power supply devices as well as software solutions with modular programming for various test procedures. Moreover, Elabo Electronic provides the calibration of inspection equipment and their compliance with European standards.

Elabo TrainingSystems is the leading partner in basic and advanced vocational education in electrical engineering, electronics and neighboring fields. Our performance spectrum ranges from the planning and complete equipping of classrooms to the provision of all teaching materials and seminars for instructors.

Elabo AssemblySystems develops and realizes assembly workstations and assembly lines – also with integrated quality, function and safety test systems – for manual and semiautomatic production.

Elabo TestSystems provides the engineering and realization of compact test stations, complex test systems and process-integrated testing networks for comprehensive quality assurance in the electrical industry and industry sectors which utilize electronics.

ELABO ProcessControlSystems realizes process control stations for monitoring and controlling processes in industry and energy utilities, electronic data processing and computer centers, and also in traffic and building management, security engineering and many other areas.
