## PIEZORESISTIVE OEM PRESSURE TRANSMITTERS

### Series 4 LC...9 LC

-40...150 °C, WITH EMBEDDED SIGNAL CONDITIONING

The Series 4 LC...9 LC family of miniature OEM pressure transmitters combines a piezoresistive pressure sensor with -40...150 °C-capable signal conditioning in one compact, easy-to-integrate package.

#### Technology

The "LC" line of miniature pressure transmitters leverages Keller's extensive background in high-stability piezoresistive pressure sensors and innovative digital signal processing. Now, both pressure sensor and signal processor are integrated into a miniature, hermetically-sealed housing no larger than was once required for the sensor only!

The name given to this new technology is Chip-In-Oil (CIO). CIO means not only that the entire pressure transmitter is embedded within a hermetically-sealed, oil-filled housing, but that this transmitter can then be seamlessly integrated into the OEM product, achieving cost savings and system performance not possible with other, conventional technologies.

#### Interfaces

The ratiometric analog output simplifies the integrators task by providing a signal output wherein the output is ratiometric to the supply, thereby eliminating the need to incorporate an expensive, absolute reference. Providing an 0.5...4.5 VDC output from a 5 VDC supply, the LC-transmitter is inherently protected against overvoltage and reverse polarity up to  $\pm 33$  VDC and provides noise immunity by a factor of 10X relative to the latest standards regarding emitted and conducted EMI.

#### Performance features

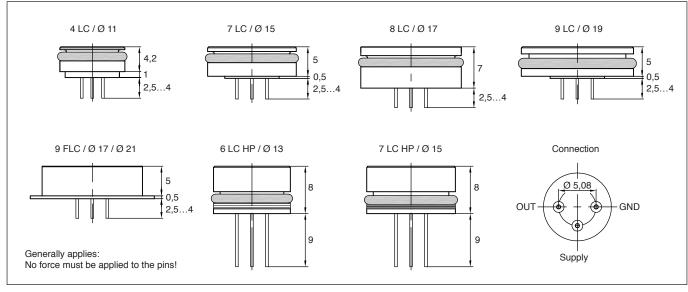

- Hermetically protected sensor electronics extremely resistant to environmental influences
- Operating temperature up to 150 °C
- Ultra-compact, robust housing made from stainless steel (optionally Hastelloy C-276)
- No external electronics for compensation or signal processing
- Extremely accurate, outstanding long-term stability, no hysteresis
- Pressure ranges of 1 bar to 1000 bar
- · Extremely easy to integrate in overall systems
- Two-chip solution with pressure sensor and signal processing separation provides a high degree of flexibility.

## **KELLER**

The integration of the transmitter electronics means that even extremely small designs can be properly supported, and there is a considerable amount of freedom for connection variants. Furthermore, there is no need to protect the nonexistent downstream electronics against moisture and con-

Material in Contact with Media Stainless Steel AISI 316L (DIN 1.4404 / 1.4435) / optionally Hastelloy C-276

Exception: 6 LC HP / 7 LC HP optionally and @>600 bar and >100 °C: Inconel 718 @ 6 LC HP / 7 LC HP: Viton® 90 Shore A O-Rings: Viton® 70 Shore A

Support Ring @ 6 LC HP / 7 LC HP: PTFE

Pressure Endurance 0...100% FS @ 25°C: > 10 mio. pressure cycles with appropriate installation (see install. requirements)

Vibration Endurance 20 g, 5....2000 Hz, X/Y/Z-axis

Shock 75 g sine 11 ms

Oil Filling Silicone oil, others on request

**Electrical Connection** - Glass feed through pins D = 0,45 mm, L = 2,5...4 mm, Positioning: See scale drawing.

Attention: It's important not to load forces to the pins!

- Silicone wires 0,09 mm<sup>2</sup> @ the glass feed through pin

- Plug JST 1,5 mm, 3-pole. Type: B3B-ZR-SM4-TF. Only for -20...85 °C and not for 4 LC & 6 LC As counterpart: IDC-socket with 1,27 mm flat band. Type: 03ZR-8M-P

As counterpart: Crimp-socket with wires AWG 28. Type: ZHR-3, Crimp-contact: SZH-003-P0.5

Other pressure and temperature ranges, other accuracies.

**Options** 

Applications requiring a mechanical package with certain pressure and electrical connections can be accommodated. Almost any combination of connections is possible with our Series 21C product line. CIO is optionally available with the 2-wire I2C digital interface, enabling bus-capability in the system design.
