

Press Load Cell

for hand and automatic operated presses

MODEL 8451

Measuring ranges 0 ... 50 kN up to 0 ... 100 kN

Measuring ranges up to 0 ... 2 kN Measuring ranges 0 \dots 5 kN up to 0 \dots 20 kN

Highlights

- Measuring ranges from 0 ... 500 N up to 0 ... 100 kN
- Non-linearity < 0,25 % F.S.
- Protection class IP65 / IP67
- Simplest mounting on press ram
- Robust construction with mechanical overload protection

Applications

- Forces in component joining
- Press-fitting
- Bending forces during material deformation
- Cutting forces when severing materia
- Forces during stamping processes
- Punching forces for blanks
- Break-out forces used in destructive testing

Product description

The Load cell model 8451 has been developed for measuring the forces that occur during press operation. The internal measuring elements have a rugged design, which mean they can cope reliably with the steep force curves that are typical of press applications. They can be fitted or replaced quickly and easily on the press ram without the need for additional components around them. The force sensor is placed between the tool and the press ram and can thus measure the actual compression force directly in the axis of operation.

The load cell measures the compression forces between the circular contact surfaces of plunger and tool. The pin on its top side and hole on its lower face are simply provided for mechanical fixing and centering the components correctly. The connecting cables are suitable for drag chains, designed for many movements and stably fastened in the sensor housing. Attachments are available which clamp onto the press sensors to enable easy mounting of displacement sensors according to the circumstances of use.

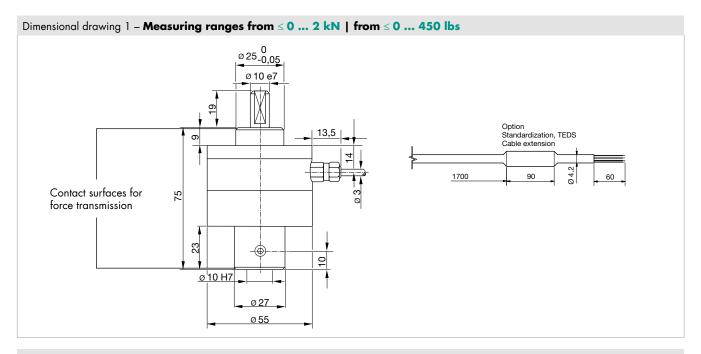

Technical Data

Electrical termination

Output signal

burster load cells are based on a strain-gage Wheatstone bridge. This measurement principle means that the output voltage mV/V is highly dependent on the sensor supply voltage. Our website contains details of suitable instrumentation amplifiers, indicator and display devices and process instruments.

The "**burster T**ransducer **E**lectronic **D**ata **S**heet" (TEDS) is a memory in which identification data of the sensor, calibration data and other sensor parameters are saved. In conjunction with your own suitable burster device, there is the option of performing a simple adjustment in order to achieve the maximum accuracy of the measuring chain. A simple sensor exchange is thus possible in just a few steps without losing precision.

Options

Ball guide:

Radial backlash-free design due to ball guide inserted in the load cell for measuring ranges from 0 \dots 500 N to 0 \dots 2 kN

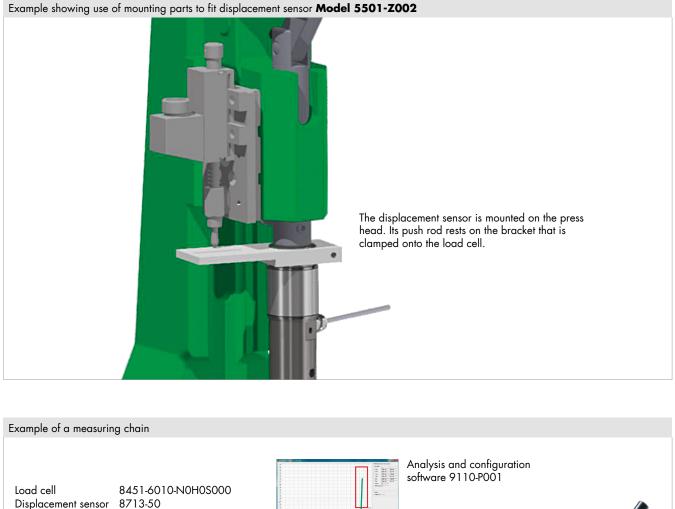

Accessories

Connectors and units

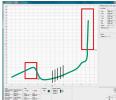

Order code	
Connectors	
9941	Connectors 12 pin, suitable to all burster desktop units
9900-V209	Connectors 9 pin, suitable to SENSORMASTER, DIGIFORCE® and TRANS CAL
9900-V229	Connectors 9 pin with TEDS
9900-V245	Connectors 8 pin, suitable to ForceMaster
Units	
9110	ForceMaster 9110 - Monitoring for hand presses
9311/9307	DIGIFORCE® - Monitoring for hand presses + force and displacement monitoring
refer to section 9	Sensor electronics, amplifier and process control units like digital indicator model 9180, model 9163, modular amplifier model 9250

Calibration

Test and calibration certificate										
Supplied with the sensor	Amongst other data, includes figures for zero point, full-scale output and calibration offset									
Standard factory calibr	ration certificate for load cells or measurement chains (WKS)									
Optionally available	Our standard factory calibration is performed in 20% steps starting from zero until the reaching the nominal force, for increasing and decreasing load with unchanged installation position. Factory calibration is performed in the compression direction.									
Special factory calibration certificate for load cells or measurement chains (WKS)										
On request	We are happy to calibrate sensors and measurement chains to the customer's specification.									
Calibration certificate v	with accreditation symbol for product group load cell 8451									
Optionally available	Calibration certificate with accreditation symbol for load cells 8451. Calibration is performed on the basis of the accreditation of the calibration laboratory D-K-15141-01-00, for the scope of accreditation listed in the annex to the certificate. The traceability to national standards as well as a wide international recognition (DAkkS as signatory of the Multilateral Agreements of EA, ILAC and IAF) are thus guaranteed. Calibration is performed according to ISO 376 in 10 force steps (10% steps) vstarting from zero until the reaching the nominal force, for increasing and decreasing load under various installation positions.
